YOUR RIDE. YOUR WAY.

Gear and accessories aren't just gear and accessories. They're a chance to make your sled and your experience all your own. Arctic Cat® gives you everything to do exactly that. From cargo bags and backcountry kits to jackets and Tucker Hibbert gear, it's all right here. Because the only thing better than an Arctic Cat experience is an experience that's personalized just for you.

We’ve designed our line of Arcticwear with loads of features to enhance technical performance, convenience and comfort. Key features that appear throughout the catalog are defined below, making it easy to find the gear that perfectly matches your riding style.

MOUNTAIN JACKETS & COATS

With their waterproof, breathable nylon outer shell and peak ventilation, these jackets are designed for the aggressive mountain rider. Most of the mountain jackets and coats are also compatible with zip-out insulated Flex liners (shown on pg 25) for added thermal protection in extreme cold. With fabric technologies tuned for mountain riding, these jackets aim to keep you dry, comfortable and on the move.

ALL MOUNTAIN JACKETS & COATS FEATURE:

- Waterproof, breathable non-insulated nylon outer shell fabric
- 100% seam sealed
- Teflon®-treated outer shell fabric
- Interior MP3 pocket
- Reflective trims
- YKK zippers
- Vents
- Soft collar and pocket lining
- Glove D ring

DUAL SPEED
COMPRESSION (DSC)

With DSC, you can adjust the shock's high- and low-speed compression damping by simply turning the external adjusters. DSC allows you to maximize small bump compliance and traction while still having the extra damping required for big hits.

EVOL AIR
CHAMBER

The infinitely adjustable pressure setting in the extra volume (EVOL) air chamber regulates spring rate in the final portion of the stroke and controls the bottom-out characteristics of the shock.

KASHIMA COAT

FOX FLOAT 3 and ZERO shocks feature Genuine Kashima Coat. The distinctive gold color is backed by its high-performance properties that provide reduced friction, an exceptionally smooth feel and extreme durability.

QS3 (3 SETTING QUICK
POSITION SWITCH)

Choose from three specifically calibrated ride control settings to tune in your own personal ride and handling setting. The QS3 supplies a wide range of adjustments while simply allowing the user to make a change quickly without tools.

REBOUND DAMPING

Rebound damping controls the rate at which the shock returns after it has been compressed. The proper rebound setting is a personal preference and changes with rider weight, riding style and conditions.

LOW-SPEED COMPRESSION ADJUSTMENT

Allows precise control of the suspension resistance for ski lift and front-end diving when cornering and braking, rear-end squatting under hard acceleration, riding over whoops at moderate speed, undulations and elevation changes in the terrain.

HIGH-SPEED COMPRESSION FIRMNESS

Allows precise control of the suspension for landing from big jumps, harsh or sudden square-edged impacts, riding at high-speed over whoops, vibration when riding at very high speed or when riding over choppy terrain and snow tracks.

REBOUND EXTENSION SPEED

Controls the speed at which the shock absorber return to its fully extended position after being compressed from an impact to maintain skis or track on the snow.

THREADED SPRING PRELOAD

Allows fine-tuning of sled ride height to raise or lower the center of gravity and precisely balance the weight distribution across the front and rear sections of the sled without affecting the spring rate.

PRO MTN ACCESSORIES

You thrive in tough conditions. So do these accessories. Each of our accessories is tested and proven worthy by legendary backcountry riders Dave McClure and Rob Kincaid in the most rugged terrains possible. Because the way we see it, your accessories should be just as at home in the backcountry as you are.

ARCTIC MOUNTAIN SUSPENSION™ A-ARM KITS

The Arctic Mountain Suspension, with its single-post spindles and A-arms, boasts a narrower stance and steeper caster angle. This suspension design makes it easier to carve, easier to initiate a sidehill and easier to navigate through the trees.

- 38-in. kits do not require shock modification. 36-in. kits require shock rebuilding to add shortening spacer
- Arctic Cat recommends sending shocks to an authorized FOX® service center

TRACK RACK SYSTEM «NEW

Unique design allows you to easily slide a Utility Jug or Gear Bag on and off your tunnel. A raised mounting track keeps the gear away from your tunnel. Mounting tracks are made of HDPE plastic for durability plus resistance to snow and ice buildup. Heavy-duty Utility Jugs are UV-protected. Hard-sided Gear Bags are made of water-resistant polyester with a urethane-coated outer shell and feature padded foam lining. The Utility Jug and Gear Bag base slides easily onto the mounting track. Mounting Track, Utility Jugs and Gear Bags are sold separately. Note: Utility Jugs are not intended for fuel storage.

MAXIMIZE STEERING CONTROL

The length of the turning carbide (carbide inserted directly under the steering spindle) is the determining factor on steering control. The longer the turning carbide, the more positive turning becomes. Too few studs with long turning carbides can result in the situation shown in Illustration 1 below.

MAXIMIZE TRACTION CONTROL

The quantity and types of studs inserted through the track can have several effects. If installed improperly, track and/or stud damage can result. If the pushing force from an excessive number of studs exceeds the ability of the steering to control the force, the effect could be like that in Illustration 2.

In this case, the studs tend to “push” the skis in a straight line.

- 1 Back end loose. Too much carbide, not enough steering control.
- 2 Front end pushes. Weak steering from worn wearbars, turning carbides too short or overstudding on track.
- 3 Steering control and stud quantity are in balance for proper setup.

TUNE YOUR SLED’S HANDLING TO YOUR RIDING STYLE

Determining the proper traction and control is simple. What’s your riding style: Are you a conservative trail rider or a performance trail rider? Look at the chart below. Find the line with the horsepower of your sled. Look under your riding category. Here you will discover the number of studs and the length of the carbide wearbar you should use. This is a baseline guide for stud and wearbar selection. See your dealer for specific model applications.

STUD QUANTITY / INCHES OF TURNING CARBIDE

SLED	TRAIL	PERFORMANCE
50–75 HP	48/4 in.	48/6 in.
75–125 HP	102/6 in.	153/8 in.
125–150 HP	153/8 in.	153/10 in.
150–180 HP	153/8 in.	153/10 in.

FOR STUD PLACEMENT, USE ONLY ARCTIC CAT-APPROVED STUD TEMPLATES SHOWN ON PAGE 154. Arctic Cat traction products are available in package quantities that will give you the best combinations for 121-in., 128-in., 129-in. and 137-in. tracks.

RECOMMENDED STUD LENGTH (IN.)

TRACK LUG HEIGHT	WOODY’S STUD LENGTH	STUD BOY STUD LENGTH
1.000	1.075	1.080
1.250	1.325	1.375
1.352	1.325	1.375
1.375	1.450	1.500
1.500	1.575	1.625
1.600	1.575	1.625

For stud lengths 1.325 in. and longer, we recommend the use of a Big Nut (page 153) or Power Tower Support Nut (page 153). Cobra 1.352-in. tracks have a standard lug height of 1.25 in. The overall lug height including the extended “towers” is 1.352 in. Because the towers will flex, Cobra 1.352-in. tracks use the same stud length as a 1.25-in. track.

CAUTION

- To protect the tunnel from possible damage from the studs, it is recommended that a Tunnel Protector Kit be installed on those models not so equipped
- A Short Snowflap is required when installing studs on ‘07–‘09 F Series; ‘09 Z1, Z1 Turbo; ‘09–‘11 Crossfire and CFR
- See your dealer for additional information

STUD PLACEMENT

- DO NOT use studs that are longer than recommended
- DO NOT place studs in line with the heat exchanger or tunnel protector strip, and factor in the amount of suspension travel to avoid tunnel damage
- Studs MUST NOT extend more than 3/8-in. beyond the rubber track lugs
- Verify adequate clearance between the track, tunnel and heat exchanger to avoid serious damage
- Confirm that your machine has adequate tunnel protection before installing studs
- Use only Arctic Cat-approved Stud Templates shown on page 154
- The length of carbide and number of studs must coordinate to result in balanced handling and proper control

‘05-‘17 ARCTIC CAT SADDLELESS SKI WEARBARS

NOTE: The accessory wearbars use a 4-bolt stud pattern. When using accessory wearbars on ‘05 and newer models with Saddleless Skis and a 3-bolt stud pattern, it will be necessary to drill another mounting hole in the ski.

2-CYCLE OILS

Arctic Cat lubricants are designed and developed in conjunction with our engines and are proven through thousands of hours of dyno and field testing. They deliver the ultimate performance and protection for your Arctic Cat engine, and the peace of mind you expect.

- The C-TEC2™ revolutionary clean-burning engine technology demands an entirely unique oil formulation. This lubrication system effectively delivers oil where it is required — as a result using significantly less oil compared with traditional 2-cycle engines. This technology requires a unique viscosity and blend of additives and base stocks. After several years of intense testing, numerous formulations, thousands of dyno hours and hundreds of thousands of field test miles, we landed on this unique oil technology.
- The ONLY oil recommended for the C-TEC2 engine, but approved for ALL Arctic Cat 2-cycle engines
- Reduction in recoil pull-effort during cold weather starting
- Convenient C-TEC2 oil packaging provides easier pourability and less waste
- Fully synthetic formulation provides ultimate engine protection
- Detergent additives maximize Arctic Power Valve™ and engine cleanliness
- Smokeless formulation burns extremely clean with a fresher scent

6639-520 48 oz. | 6639-521 2.5 gallons

APV™ SYNTHETIC OIL

- Outstanding performance for all non-C-TEC2 Arctic Cat 2-cycle engines
- Protects against engine wear with excellent lubricity
- Provides excellent Arctic Power Valve cleanliness
- Smokeless formulation burns clean
- Helps prevent piston scuffing, varnish formation and deposit buildup

4639-349 Quart | 5639-469 Gallon
4639-347 2.5 gallons

FORMULA 50

- Recommended for non-Arctic Power Valve 2-cycle engines
- Performs well over a wide range of operating temperatures
- Minimizes engine wear
- Prevents rust/deposit formation

5639-475 Quart | 5639-476 Gallon
5639-477 2.5 gallons

4-CYCLE OILS

Arctic Cat synthetic C-TEC4™ engine oil is purpose-built and proven for Arctic Cat 4-cycle snowmobile engines, and is the ONLY oil recommended by Arctic Cat engineering. The unique synthetic formulation of C-TEC4 allows your engine to deliver optimum performance and provides the ideal viscosity for easy cold weather starting and protection.

- Provides superior performance in ALL operating conditions including in the extreme cold
- Synthetic base stocks offer high lubricity that protects engine from wear and scuffing
- Exclusive formulation includes additives that help prevent deposit formations, ring sticking and engine wear

6639-524 Quart | 6639-525 Gallon

- For use in ALL Arctic Cat 4-cycle snowmobiles including turbo engines

6639-528

- Synthetic Oil Change Kit for the 1056cc Twin Engine
- Includes one gallon of synthetic C-TEC4 oil, oil filter, o-ring, washer and disposable funnel

6639-529

- Synthetic Oil Change Kit for the 1049cc and 998cc (2017 9000) Triple Engine
- Includes one gallon of synthetic C-TEC4 oil, oil filter, gaskets and disposable funnel

7939-042

- Synthetic Oil Change Kit for the 700cc Twin Engine
- Includes one gallon of synthetic C-TEC4 oil, oil filter and disposable funnel

SYNTHETIC CHAIN LUBE

- Designed for Arctic Cat chain-driven snowmobiles

BELTS

- > Custom fit to match each Arctic Cat sled and specific use
- > Better contact with clutch surface and faster acceleration from double cogs
- > Increased belt life by running 15° cooler than aftermarket belts
- > Reinforced with Aramax® aramid fibers for huge strength and durability
- > Increased power transmission and less slip from aramid-fiber rubber compounds
- > Kevlar® drive belts available for F, M, ZR and XF models, which dramatically extend belt life and sustain belt length better than steel cords

NOTE: Proper break-in period required

PREMIUM ARCTIC CAT "EXTENDED-LIFE" ORIGINAL EQUIPMENT REPLACEMENT BELTS

Don't settle for anything less than a drive belt built specifically for your sled. Proven through extensive lab and field testing, original equipment Arctic Cat replacement belts are precision-engineered for each Arctic Cat snowmobile.

CUSTOM-ENGINEERED FIT

While non-OEM aftermarket belts offer "one construction fits all," Arctic Cat Research & Development custom engineers each genuine Arctic Cat belt to match the specific performance characteristics of your sled. This produces the best combination of strength, durability and responsiveness for lower-horsepower, fan-cooled sleds all the way up to high-horsepower muscle sleds. Each one is built using only the finest materials, incorporating precision manufacturing techniques to meet exacting tolerances.

TOP & BOTTOM COGS

Arctic Cat original equipment belts are double cogged, so more of the belt contacts the clutch surfaces. This results in faster acceleration, maximum efficiency and superb overall performance. Double-cog design provides structure while adding surface area for greater cooling and longer life. In fact, this belt runs up to 15° cooler than flat-top aftermarket belts.

ARAMAX HIGH-MODULUS (LOW-STRETCH) ARAMID-FIBER TENSILE MEMBER

The Aramax inner cord provides incredible strength and durability for high-horsepower, high-performance sleds. In addition, each belt is reinforced with top-grade, high-flexibility, shock-resistant Aramax aramid-fiber cords, and chemically treated for maximum power transmission and length stability.

HIGH-PERFORMANCE PREMIUM COMPOUNDS

Arctic Cat's OEM belts incorporate advanced "premium" compound materials that ensure optimum belt performance under all riding conditions. The advanced aramid-fiber-loaded rubber compound resists wear and delivers consistent power while minimizing slippage over a broad range of operating temperatures. The thicker, highly flexible design increases grip to clutch surfaces for increased power transmission.

ARCTIC CAT KEVLAR DRIVE BELTS

These ultimate-performance Arctic Cat Kevlar drive belts are custom engineered for F, M, ZR and XF models. Extended-life belts feature top- and bottom-molded cog construction and high-performance compounds. Inside, the Kevlar cord provides increased belt life. Please note that proper belt "break-in" is required.

Snowmobiling is serious fun. Be sure to read and understand your owner’s manual and please pay special attention to the safety instructions. Arctic Cat Inc. endorses and encourages the safe use of all snowmobiles. Be careful, you can get hurt. Wear a helmet and don’t drink and ride. Be aware of natural hazards you may encounter, allow yourself plenty of room to safely stop your snowmobile under all conditions, and maintain your equipment. Your safety is in your hands, so take care. All scenes depicted or described in this brochure were performed by professional riders under carefully controlled conditions. Leave the fancy riding to the pros; they practice for years and train very hard to make it look easy. Never attempt to duplicate these maneuvers or encourage others to do so. We care about your safety and enjoyment of the sport.
